

TRANSPARENCY

Using tints of the colors can create a dynamic effect. It also adds visual depth and flexibility to show information hierarchy.

DYNAMIC
Use tints of colors to create a more layered and richer effect. Combine with monotone images or create duotones to bring images from different sources together.

HIERARCHY
Tints of colors can be used to highlight information. The use of tints also adds visual interest to information graphics, such as charts, graphs, and illustrations. Ensure colors and tints provide a sufficient contrast to maintain clarity and legibility.
